

Dear Mr. Tillery,

Thank you for taking time to review my resume and application. I hope you will consider me as a strong candidate for the position of UX/UI Designer. In the attached resume you will find all relevant coding experience, skills and work history.

I recently graduated from the UNC Charlotte full stack web development program (Coding Bootcamp) on October 6, 2020, and presently seeking an employment opportunity in the Greater Chicago area.

I have a passion for developing dynamic, user friendly, refined, responsive and aesthetically alluring UI. I enjoy using React, Javascript, JSX, HTML and CSS in combination with Pixelmator (graphics software) to deliver an outstanding and memorable experience for the user. I have a firm understanding of server and database integration and also have experience in server side coding using MySQL, MongoDB, Sequelize, and REST API.

I share your core values of teamwork, customer success, quality products and a desire to continue improving in the work I produce, in all of my interactions with my clients and peers, and in the community.

I believe that Buildout will be a perfect fit for me in a role that I may grow into with great teachers/mentors and a culture of helping each other out when needed. I have a drive to succeed, to help others succeed, to always continue learning, and am committed to meeting the needs of the client through excellence, integrity and understanding.

My best qualities I believe include my ability to problem solve, and my innate desire to always continue honing my skills as a developer. I am a quick learner with a strong work ethic, and enjoy working as part of a development team in an agile environment. I have excellent oral and written communication skills, and highly value frequent communication with management and coworkers.

Relevant experience obtained at UNC Charlotte's coding bootcamp are listed for your consideration below:

Built applications from the ground up starting with client side coding (React, Javascript, HTML, CSS) to the back end in creating an established connection with a server in order to communicate with databases (MySQL, MongoDB) and external API's all while implementing an organized file system and easy to read code with comments to assist my leaders and peers in merging and expanding on code I've written and pushed to GitHub.

I am confident that my skills, ambition to succeed, desire to help others succeed and drive to continue learning will prove useful in my position as a UX/UI designer.

I am grateful to you for taking time to review my application, and I hope to progress to the next phase in the application process with Buildout. I look forward to hearing from you soon.

Sincerely,

Evan Bero
